Round 2 Mathematics - CTE Crosswalk for embedded credit

The next Career and Technical Education (CTE) programs that will be examined for embedded mathematics standards based content include the following list:

Engineering Sciences

Information Technologies (additional options)

Drafting and Design Technologies

Precision Manufacturing

Welding Technologies

Marketing, Management and Entrepreneurship

Design and Merchandising

Identified programs will undergo a treatment similar to the first five CTE programs, with an initial review for significant mathematics content; finding suitable content, then teams of experts will be assembled and the work undertaken. After suitable validation processes the crosswalks will be assembled and prepared for presentation and publication.

The initial review will begin this fall and the expert validation teams will be appointed during the winter, expecting to complete the processes for approval in late spring/early summer.
